US Marine Corps F-4 Phantom II Units of the Vietnam War Nov 20 2021 Twenty-five US Marine Corps squadrons flew versions of the Phantom II and 11 of them used the aircraft in South-East Asia from May 1965 through to early 1973. Rather than the air-to-air missiles that were the main component in the original F-4 armament, these aircraft carried an ever-expanding range of weaponry. Some toted 24,500-lb bombs and others strafed with up to three 20 mm gun pods, while most flew daily sorties delivering napalm, Snakeye bombs and big Zuni rockets. Many US Marines holding small outpost positions in Laos and South Vietnam against heavy Viet Cong attack owed their lives to the Phantom II pilots who repeatedly drove off the enemy. The book will examine these missions in the context of US Marine Corps close-support doctrine, using the direct experience of a selection of the aircrew who flew and organised those missions.

Factors to Consider in Blending Active and Reserve Manpower Within Military Units Apr 13 2021 A 2002 Department of Defense (DoD) report stated that the military services developed or adopted many innovative approaches to unit structures and organization as force size changed and operational tempo increased. The report suggested that organizational concepts leading to a more flexible, capable force must be implemented more broadly to better capitalize on the capabilities and strengths of the reserve components. In particular, such organizational concepts include blending active component (AC) and reserve component (RC) workforces in military units. We define blending as any arrangement or event that brings active and reserve manpower together within organizations for a common purpose. At the organizational level where mission work is actually done, there is interest in workforce integration between the components.

Event Data Recorder (EDR) Interpretation Mar 25 2022 The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers

surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.

B-1B Lancer Units in Combat May 27 2022 The development of the B-1B Lancer bomber was difficult to say the least. Originally conceived to fulfill a USAF requirement for an Advanced Manned Strategic Aircraft, the original B-1A concept aircraft was accused of being a white elephant, capable of performing nothing which could not be achieved at less financial and human expense than an intercontinental ballistic missile. Cancelled by the Carter administration and finally commissioned by President Reagan as the modified B-1B, the Lancer began its duties as a nuclear-armed bomber in the mid-1980s. The end of the Cold War intervened and the jet was removed from its nuclear missions as a result of arms control legislation. However, the 1990s saw the metamorphosis of the Lancer into a potent conventional weapons carrier which has seen action in Iraq, the Balkans and Afghanistan. The Lancer has proved its critics wrong in demonstrating its use as a highly flexible and hard-working bomber, able to undertake diverse missions ranging from CAS to the targeting of weapons-of-mass-destruction installations.

History of Nikon Corporation Nikon Corporation is a multinational corporation established in July of 1917 in Tokyo, Japan. The current headquarters for this renowned entity is located Shinagawa in Tokyo, Japan and is believed, as at March 2011, to have approximately 25,000 members of staff in its global employ. The corporation, when first established, was a combination of three of Japan's leading optical manufactures. It was first known as Nippon Kogyo Kabushiki gaisha or Japan Optical Industries Corporation. Name changes followed in 1946 to Nikon and later to the Nikon Corporation in 1988, after the creation and release of its small-sized cameras. Intending to dominate the market from its foundation, the corporation initiated the engineering of optical glass in 1918, marketed its MIKRON 4x and 6x binoculars in 1921 and its JOICO microscope shortly thereafter in 1925. The JOICO was the first ever developed telescope by Nikon and bears the name of the company's first initials. In 1932, the brand name NIKKOR was adopted for the cameras lenses being designed and released globally. The development of cameras followed shortly thereafter with the release of its first small-sized camera; named the Nikon Model 1 in 1948. The company continued its growth; being listed on the Tokyo and Osaka stock exchanges in 1949 and being lauded by the New York Times for its impressive Nikon cameras and NIKKOR lenses in 1950. This global introduction later resulted in the establishment of a NIKKOR club in 152 and the Nikon Optical Co. Inc.; now using the named Nippon Kogaku (U.S.A) Inc. in the United States in 1953. Nikon divisions were later established in Switzerland, the Netherlands, Canada, China, Poland, Thailand, Dubai, Brazil and the United Kingdom; extending the reach of this innovative company. Since its inception, almost a century ago, Nikon continues to revolutionize the field and is now responsible for the production of imaging and optical products globally.

F-111 & EF-111 Units in Combat Nov 08 2020 The General Dynamics F-111 was one of the most technically innovative designs among military aircraft, introducing the variable-sweep wing, terrain-following radar, military-rated afterburning turbofan engines and a self-contained escape module among other features. Designed as a cost-saving, multi-role interceptor, naval fighter and strike bomber, its evolution prioritised the latter role and it became the USAF's most effective long-range strike aircraft during three decades of service. Rushed into combat in Vietnam before some of its structural issues were fully understood, the type suffered several early losses and gained an unfairly negative reputation that dogged it for the rest of its career, and restricted funding for more advanced versions of the design. However, in Operation Linebacker in 1972 the F-111 flew 4000 nocturnal under-the-radar missions, delivering, with unprecedented accuracy, many decisive blows that would have resulted in heavy losses for any other attack aircraft.
