Studies in English Trade in the 15th Century May 26 2022 Of all the activities of the most neglected century in English History, England's trade has received the least attention in proportion to its

importance. It was obviously in the course of the later Middle Ages, and more particularly in the fifteenth century, that there took place the great transformation from medieval England, isolated and intensely local, to the England of the Tudor and Stuart age, with its world-wide connections and imperial designs. It was during the same period that most of the forms of international trade characteristic of the Middle Ages were replaced by new methods of commercial organization and regulation, national in scope and at times definitely nationalistic in object, and that a marked movement towards capitalist methods and principles took place in the sphere of domestic trade. Yet little has been written concerning English trade in this period. First published in 1933, this classic volume goes a long way to fill this gap superbly. There is an abundance of material, and the writers have compiled a statistical analysis of the Enrolled Customs Account from 1377-1482, which provides an essential measure of the nature, volume, and movement of English foreign commerce during the period.

Test Policy and the Politics of Opportunity Allocation: The Workplace and the Law Jul 24 2019 Bernard R. Gifford In the United States, the standardized test has become one of the major sources of information for reducing uncertainty in the determination of individual merit and in the allocation of merit-based educational, training, and employment opportunities. Most major institutions of higher education require applicants to supplement their records of academic achievements with scores on standardized tests. Similarly, in the workplace, as a condition of employment or assignment to training programs, more and more employers are requiring prospective employees to sit for standardized tests. In short, with increasing frequency and intensity, individual members of the political economy are required to transmit to the opportunity marketplace scores on standardized examinations that purport to be objective measures of their and potential. In many instances, these test scores are the abilities, talents, only signals about their skills that job applicants are permitted to send to prospective employers. THE NATIONAL COMMISSION ON TESTING AND PUBLIC POLICY In view of the importance of these issues to our current national agenda, it was proposed that the Human Rights and Governance and the Education and Culture Programs of the Ford Foundation support the establishment of a "blue ribbon" National Commission on Testing and Public Policy to investigate some of the major problems as well as the untapped opportunities created by recent trends in the use of standardized tests, particularly in the workplace and in schools.

Economic and Business issues in Retrospect and prospect Jan 28 2020 There is a strong view that economics is the academic discipline that best represents the claim of positive science among social sciences. Economics has undergone significant transformations after its emergence as a science. Despite all these transformations, the feature containing positive and normative elements has not changed. While economists from the political economy tradition focus on qualitative studies that relate to other social sciences, especially political science and history, a group of economists adopt the qualitative methods of natural sciences to analyze economic problems. There is a debate among economists on how to understand social reality and what kind of science the economy should be. Business is a discipline that has declared its relative independence from economics over time. Business is a research field that encompasses a wide range of areas ranging from organizational behavior of individuals to the firm's production and marketing strategies. This book contains articles on essential

topics related to these disciplines, which have an in- separable relationship between them. Academicians contributing to the book have produced works on current topics of discussion as well as key subjects that remain important in economics and management.
