[Amateur Radio HF Antennas](#) May 31 2020 This fourth e-book in the series on Amateur Radio HF Antennas covers essential, and often illunderstood HF antenna accessories. Lightning on the horizon? You are not worried ... because you installed the lightning protection devices described in this e-book, and you have taken the preventive measures as prescribed. But that's not all. Your HF antenna is now transmitting more RF power, and your receiver is getting more milliwatts from your antenna system, because you learned what types of antenna tuners to avoid. You are now using an efficient tuner, and you even know how it works. Your antenna tuner will likely have its own SWR/PWR meter. Notwithstanding, this e-book will help you decide if you still need an outboard one, and which meter will best meet your needs. Furthermore, armed with the valuable information you read here, you finally acquired the antenna analyzer to satisfy the expectations of the antenna experimenter in you. Emboldened by your recent successful acquisitions, you now have the antenna tower you were dreaming of. You heeded the recommendations this e-book provided and, thus, avoided all the pitfalls that await the unwary. Finally, an e-book series on HF antennas would not be complete without a word on HF signal propagation. It outlines the software and online services available today which enable you to take full advantage of band openings.

[Software Defined Radio](#) Jan 19 2022 What Is Software Defined Radio A radio communication system known as software-defined radio (SDR) is one in which components that are typically implemented in hardware are, instead, implemented by means of software on a personal computer or embedded device.

Historically, radio components have been implemented in hardware. Although software-defined radio is not a new idea, the constantly advancing capabilities of digital electronics have made it feasible to practically implement many procedures that were previously only conceivable in theory. How You Will Benefit (I)

*The N-BOD2 User's and Programmer's Manual* Mar 29 2020 A general purpose digital computer program was developed and designed to aid in the analysis of spacecraft attitude dynamics. The program provides the analyst with the capability of automatically deriving and numerically solving the equations of motion of any system that can be modeled as a topological tree of coupled rigid bodies, flexible bodies, point masses, and symmetrical momentum wheels. Two modes of output are available. The composite system equations of motion may be outputted on a line printer in a symbolic form that may be easily translated into common vector-dyadic notation, or the composite system equations of motion may be solved numerically and any desirable set of system state variables outputted as a function of time.
