To My Arrogant Boss Aug 26 2019 To Mr. Tate Howard, You are quite possibly the most infuriating, annoying and grumpy man I've ever met in my life. I know you think that you're God's gift to women, but I have a secret to let you in on: you're not. You're God's gift to yourself. Get over your wanna-be cool surfer self and grow up. I thought it was time that someone addressed your big head and told you straight to your face that you're not all that. Just because you have an Ivy league education doesn't mean you're the smartest man in the world. In fact, I'm not even sure if you would have gotten in if you didn't have rich parents. Yes, I went there. Every woman doesn't want to sleep with you and I'm sure you're not even good in bed. And I'm someone that would know. From, Your Secret Not Admirer

Away Jun 16 2021 A stunning, evocative novel set in Ireland and Canada, Away traces a family's complex and layered past. The narrative unfolds with shimmering clarity, and takes us from the harsh northern Irish coast in the 1840s to the quarantine stations at Grosse Isle and the barely hospitable land of the Canadian Shield; from the flourishing town of Port Hope to the flooded streets of Montreal; from Ottawa at the time of Confederation to a large-windowed house at the edge of a Great Lake during the present day. Graceful and moving, Away unites the personal and the political as it explores the most private, often darkest corners of our emotions where the things that root us to ourselves endure. Powerful, intricate, lyrical, Away is an unforgettable novel.

Radar Instruction Manual Nov 02 2022 Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration?s three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. Doing Math with Python Jul 18 2021 Doing Math with Python shows you how to use Python to delve into high school–level math topics like statistics, geometry, probability, and calculus. You'll start with simple projects, like a factoring program and a quadratic-equation solver, and then create more complex projects once you've gotten the hang of things. Along the way, you'll discover new ways to explore math and gain valuable programming skills that you'll use throughout your study of math and computer science. Learn how to: –Describe your data with statistics, and visualize it with line graphs, bar charts, and scatter plots –Explore set theory and probability with programs for coin flips, dicing, and other games of chance –Solve algebra problems using Python's symbolic math functions –Draw geometric shapes and explore fractals like the Barnsley fern, the Sierpinski triangle, and the Mandelbrot set –Write programs to find derivatives and integrate functions Creative coding challenges and applied examples help you see how you can put your new math and coding skills into practice. You'll write an inequality solver, plot gravity's effect on how far a bullet will travel, shuffle a deck of cards, estimate the area of a circle by throwing 100,000 "darts" at a board, explore the relationship between the Fibonacci sequence and the golden ratio, and more. Whether you're interested in math but have yet to dip into programming or you're a teacher looking to bring programming into the classroom, you'll find that Python makes programming easy and practical. Let Python handle the grunt work while you focus on the math. Uses Python 3

Executive Economics Apr 14 2021 What do economists know that business executives find useful? Economics ought to be indispensable for business decision-makers because it deals with the issues executives face daily: what to pro duce, how and how much, at what price, how best to use resources (time, labor, capital), how to understand markets. Why, then, do managers often think that economists' theories are ivory-tower and impractical? Perhaps because most economics texts are mystifying, jargon-rid den, and written from every perspective except that of the line manager. In Executive Economics: Ten Essential Tools for Managers, Shlomo Maital brings economics down to earth, back to the hard day-to-day decisions that executives have to make. He shows how all decisions can be organized around two key questions: What is it worth? What must I give up to get it? Answering these questions depends upon finding and maintaining the right relation in the "triangle of profit" -- cost, price, and value. Each of Executive Economics ten chapters focuses on one or more legs of the triangle of profit, defines a decision tool, and illustrates how it can be used to improve the quality of executive decisions. Drawing on recent examples from both Fortune 500 firms and smaller companies, Maital shows why economics main contribution is to deepen executives' understanding of the structure of their costs, and to explain why some of a business's highest expenses are those that never appear on a check stub or in a profit-and-loss statement. Executive Economics is written for executives, about executives, and by an author who has both taught executives at MIT's Sloan School of Management for over a decade and served as a consultant to small and large businesses. It is must reading for executives who need simple, effective decision-making tools to give them an edge in today's competitive global economy.

Death Waits in the Dark *Apr 02 2020 It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.*

Can you imagine what it would be like not to have any memory of your first ten years of life?

Jake Howard knows how that feels. He's a successful psychiatrist and writer. He has an apparently adoring lover and the respect of his peers. But he also has a huge gap where his childhood memories should be. What's more, Jake is tormented by the worst kind of nightmares. Nightmares he's not even sure are his.

Tormented by dreams and visions that threaten his sanity, he must find their source in order to understand and banish them.

His hunt will take him to a run-down seaside town, to the place where he was raised and also forty years back in time, to what he must confront to release himself from the grip of the visions and also to discover the hidden memories.

However, he will discover things about himself he did not dare imagine. Things he really didn't want to know.

And he will also discover that not everyone is what they appear to be. Those revelations will expose a darkness and horror that no one should have to confront.

Sometimes a lie is preferable.

Some truth is best left undiscovered...

Quality Chess Puzzle Book Nov 21 2021 When I decided to make a chess puzzle book I had many ideas in mind: The puzzles should be

challenging but not so difficult that a chessboard is needed they can be solved on the train, plane or wherever you happen to be when you have a few minutes to spare. The positions should be educational with some instructive point to the solution. I have generally stuck to that, but I also selected many puzzles just because they were fun. The positions are all from fairly recent games, so that the reader will not have seen them before in older puzzle books. John Shaw is a chess grandmaster who has been Scottish Chess Champion three times.
Asymptotic and Hybrid Methods in Electromagnetics Dec 11 2020 Asymptotic methods provide considerable physical insight and understanding of diffraction mechanisms and are very useful in the design of electromagnetic devices such as radar targets and antennas. However, difficulties can arise when trying to solve problems using multipole and asymoptotic methods together, such as in radar cross section objects. This new book offers a solution to this problem by combining these approaches into hybrid methods, therefore creating high demand for both understanding and learning how to apply asymptotic and hybrid methods to solve diffraction problems. The book provides the very latest and most comprehensive research on this subject.
